### MATHEMATICS GRADE 7 ASSIGNMENT.

#### DECIMALS

##### Place value

Place value is the position of a digit in a number.

When stating the place value of a digit in a decimal number consider the decimal point, that is, from the decimal point towards the right start with tenth.

**Therefore:**

$$1 \text{ tenth} = \frac{1}{10} = 0.1$$

$$1 \text{ hundredth} = \frac{1}{100} = 0.01$$

$$1 \text{ thousandth} = \frac{1}{1000} = 0.001$$

$$1 \text{ ten thousand} = \frac{1}{10000} = 0.0001$$

$$1 \text{ hundredth thousandth} = \frac{1}{100000} = 0.000001$$

Place value is very important because it helps us to write the numbers in words and in figures.

**Example:** What is the place value of digit 6 in 0.34608?

Ones	Tenths	Hundredths	Thousandths	Tens of thousandths	Hundreds of thousandths
0	3	4	6	0	8

Digit 6 is in the thousandth place value.
