**CLASS 8 SCIENCE JUNE ASSIGNMENT 7 2020**

**PLANTS**

**Signs of unhealthy crops**

-Unhealthy crops show the following sign

1. Stunted growth---stunted or retarded plants grow very slowly compared to healthy ones.

--The plants are weak and do not reach maturity.

---The plants remain short even when there is sufficient nutrients and rainfall.

----Their produce is low in quality and quantity.

2. Discolouration---some crops get discoloured patches on the leaves, ears and stems.

This interferes with the process of photosynthesis.

The leaves may turn yellow become dry and fall off.

3. Curled leaves ---curled or folded leaves reduce the surface area of the leaf that is exposed to sunlight.

This reduces the amount of food that can be made by the plant during photosynthesis.

4. Wilting---- This occurs when a plant loses water at a faster rate than it can absorb.

--Wilting can take place even when there is enough rainfall.

---When a plant wilts leaves droop limp and finally withers.

5. Spots and streaks.—A spot is a small isolated patch on a leaf with a different colour and texture.

Streaks formed when there is a discolouration that forms a line.

Effects of crop diseases`

- Diseases in crops usually lead to;

1. Reduced yields
2. Reduced quality of produce.
3. Increase in production costs.
